

## Why SaaS is so Powerful a Solution

---

**September 2014** - Smyyth Technology LLC, a leader in credit and accounts receivable technology and one of the Smyyth family of companies,

### **Carixa and SaaS Systems**

Carixa Credit-to-Cash - the Best in Class SaaS Solution Technology

In the past, companies bought, built and maintained their IT infrastructures despite the huge costs because there was no choice. The Internet's exploding bandwidth changed this, and Software as a Service (SaaS) is now a better alternative without the large investment. The SaaS model is growing exponentially because it offers serious business benefits.

SaaS applications including Carixa, the Smyyth enterprise credit and accounts receivable management system, are available anywhere in the world, 24X7, and are designed to be scalable for virtually all business needs. Here are some of the significant reasons why Carixa and SaaS have achieved spectacular growth.

**Best-in-Class Software Solution.** Carixa is a state-of-the-art system enabling companies of all sizes to achieve remarkable improvements in overhead costs, working capital, credit and accounts receivable, resulting in more profit.

**Lower Costs.** Unlike homegrown or third party ERP systems that generally cost many millions of dollars, SaaS applications require little or zero investment for software development or maintenance, and require no IT infrastructure. The costs savings can be huge, while providing a powerful solution virtually almost immediately.

**Painless Upgrades.** The SaaS provider handles upgrades, routine updates, bug fixes, and even minor customization for you, as well as assuring operational scalability in communications bandwidth, hardware, etc.

**Seamless Integration or Data Transfer.** SaaS developers for enterprise systems, like Carixa, have designed their systems to transfer data back and forth with ease and simplicity to interact seamlessly with virtually any application.

**Carixa for the Enterprise.** With Carixa for mid market and global companies, it is a modular or an end-to-end solution for credit-to-cash. For the far-flung enterprise, imagine instant consolidation of subsidiaries credit risk and receivables management for both corporate as well as local views and control. Want to centralize operations, outsource, or decentralize - no problem, just set the rules and it's done.

**Carixa for the CTO.** IT can focus on managing the core infrastructure, while the Carixa professionals customize and deploy this specialized application to users. While it has been designed to be self-managed by users on a day-to-day basis, the Carixa professionals are available to assist where and when needed.

### **About Smyyth and Carixa**

Carixa is a trademark of Smyyth Technology LLC. Smyyth provides world class Credit-to-Cash services and SaaS technology to manage credit risk, and optimize cash flow and profits using best practices for credit, accounts receivable, collections and deduction management. Smyyth technology and services are built on Six Sigma principles and are SSAE16 compliant. Carixa is an end-to-end credit-to-cash system for mid and large enterprises including high-performance "bolt ons" for specific needs. Carixa is an exceptional solution for credit, collection, deduction and accounts receivable management that manages risk, optimizes cash flow, and slashes overhead.
